New Toronto Implant Institute Teaching Centre Helps Dentists
Develop Surgical and Technological Skills

*Powered by Carestream Dental, Teaching Centre Aims to Improve Quality of Life Through Education and Clinical Technique*

TORONTO – The Toronto Implant Institute today announced the grand opening of its teaching centre, which will offer practitioners further education on dental implants and improve their surgical techniques. Leading the charge in opening the new teaching centre is Natalie Wong, D.D.S., a prominent prosthodontist based in Ontario. The facility also doubles as an imaging centre, using Carestream Dental cone beam computed tomography (CBCT) and digital intraoral sensors.

The centre now offers hands-on surgery classes led by Dr. Wong, with cases provided by the doctors participating in the program. Classes are limited to four people per session, and each session spans six to nine months with one meeting per month. The class size is limited by design, in order to focus the learning and tailor it to each doctor’s needs. The participating doctors will bring their own patient cases with them to the first class, and surgeries will be scheduled for the remaining sessions. In addition to hands-on surgery training, Dr. Wong will lecture during the classes and host guest speakers.

“I’m very excited by the growth of the Toronto Implant Institute and look forward to teaching many practitioners at this incredible facility,” said Dr. Wong. “My goal is to provide a high-level training facility, with individualized learning experiences, enabling these clinicians to improve the quality of dental health in their communities.”

“We’re proud that Dr. Wong has chosen to equip her new teaching centre with Carestream Dental technology,” said Matt Whiting, Carestream Dental Canada national sales manager. “We’re excited to partner with the Toronto Implant Institute and look forward to working with other organizations and oral health professionals in Canada.”

The new teaching and imaging centre is powered by Carestream Dental’s CS 9300C Select and two RVG 6100 sensors. “When I decided to open the Toronto Implant Institute Teaching Centre to promote higher learning, I also wanted to introduce doctors to new technology – Carestream Dental’s equipment was the best option for this purpose because of the superior image quality, ease of use and collaboration capabilities,” said Dr. Wong. “I want this centre to be a place for practitioners to receive top-notch, comprehensive training with industry-leading equipment.”

The CS 9300C Select is a multi-purpose extraoral imaging system that offers 3D CBCT imaging, 2D digital panoramic imaging and a cephalometric modality. With four
selectable fields of view ranging from 5 cm x 5 cm to 10 cm x 10 cm,* the CS 9300C Select gives practitioners the ability to limit radiation exposure by colimating the field of view to a precise region of interest. The RVG 6100 digital intraoral sensor has exceptional image resolution (>20 lp/mm) and delivers images in seconds. This system is designed to streamline workflow with easy image capture and analysis.

For more information about the Toronto Implant Institute, please call 1.416.566.9855 or visit www.torontoimplantinstitute.com. For more information on Carestream Dental’s innovative solutions or to request a product demonstration, call 1.800.933.8031 or visit www.carestreamdental.com.

*Dr. Wong only uses fields of view ranging from 5 cm x 5 cm to 8 cm x 8 cm to abide by Ontario regulations.

About Toronto Implant Institute
Founded in 2005, the Toronto Implant Institute aims to improve the quality of dental health within each member’s community by raising the level of awareness and skill of oral health professionals through clinically applicable lectures, hands-on laboratories and interactive group treatment planning sessions.
