

CS PracticeWorks v7.5 Fact Sheet

Product Summary

CS PracticeWorks offers practices a variety of tools to improve efficiency, simplify communication and automate daily workflows. From intuitive scheduling functions to charting and financial features, CS PracticeWorks offers advanced yet accessible technology, built upon decades of experience and the needs of clinicians across the globe. The new CS PracticeWorks v7.5 supports two new eServices – ePostings and eForms – that streamline reimbursement and enable online patient registration.

Product Features and User Benefits

ePostings: With just a few clicks of a mouse, ePostings can save hours of office time by auto-posting bulk payments. ePostings streamlines the process of receiving and posting reimbursements from insurance carriers, removing the need to decipher detailed paper EOBs. It also automatically notifies users when EOBs are received and then posts the payments directly to the appropriate patients within CS PracticeWorks.

eForms: eForms is an optional module that allows patients to complete paperwork from the comfort of home or at the doctor's office. eForms saves time by eliminating the need to transcribe written records into a digital format and improves the accuracy of patient records by reducing the possibility of clerical errors. It can even be used on an iPad^{®*} to capture a digital signature on consent forms.

Practice Central: A single screen gives users a customized overview that helps the entire team plan workdays. Critical tasks and information about the day's patients are displayed, tracking daily priorities and improving business revenues.

Managing Patient Accounts: The Office Expert component of CS PracticeWorks helps to manage every aspect of the practice, including contacting patients, documenting the results and driving revenue. For example, if a patient hasn't accepted a treatment plan, he or she can be contacted with a click of a button to encourage a scheduled treatment.

Easier Scheduling: The Appointment Expert feature allows searching using a variety of criteria and helps to instantly locate schedule gaps and search for open appointments.

Automation Expert: CS PracticeWorks automates the process of scheduling patients for their regular exams, check-ups and X-rays; generating recall cards, letters and emails to reduce no-shows; and updating procedures when complete.

eServices Integration: Carestream Dental offers a full range of optional electronic solutions that help practices securely and efficiently check insurance eligibility and file claims; send statements and process payments; and back up critical practice data. These include eClaims, ePayments, automated statements, eVerifications, eReminders and eBackup. All are easy to use and work smoothly with CS PracticeWorks software.

Clinical Applications: CS PracticeWorks offers much more than just a comprehensive practice management system – it also supports the ability to diagnose and treat patients.

It is fully compatible with Carestream Dental imaging software so it can capture new images and store them in electronic patient charts. CS PracticeWorks' electronic clinical charting solution lets users review clinical notes and planned treatment or chart scheduled procedures quickly, easily and intuitively.

Patient Care Anywhere: Real-time, critical patient information – including medications, appointments, history and recent treatments – is right at the user's fingertips with the Practice Expert and Reporting Library (PEARL) module for iPhone and BlackBerry devices. The PEARL module links mobile devices to the CS PracticeWorks software, so oral health professionals can call, text or email patients, then directly update the patients' information via smartphone.
