

CS WinOMS Cloud Fact Sheet

Product Summary

CS WinOMS provides oral and maxillofacial surgeons the tools they need to effectively manage their practice, anytime and anywhere. CS WinOMS Cloud is a hosted version of CS WinOMS software, which has been on the market for almost 20 years. In addition to storing patient information, electronic records and images in one central location, CS WinOMS Cloud features medical and dental insurance billing with automatic cross-coding, scheduling, and a complete range of tools to help track and maintain patient health. Updated components of CS WinOMS Cloud, such as the EMR-Elite module, ePrescriptions and additional user-requested enhancements, further streamline practices' clinical tasks.

Product Features and User Benefits

Hosted Solution: CS WinOMS Cloud stores all applications, data and patient information, including 2D images, under one virtual roof, giving practitioners access to the files they need 24/7. Sensitive patient and practice management files are backed up and maintained by Carestream Dental with HIPAA-compliant storage. CS WinOMS Cloud always utilizes the latest version of the software so users don't have to manually download upgrades to use new features. With CS WinOMS Cloud, oral surgeons can easily expand their practice by adding new locations or additional users without paying for additional IT infrastructure. The cloud solution also offers financial predictability with monthly fees that include the cost of all software, eliminating the need to purchase separate software licenses.

Paperless Record Keeping: CS WinOMS Cloud features the EMR-Elite module, which includes a library of customizable templates that facilitate paperless documentation of patient reports, consent forms, consultation notes and surgical notes, improving practice productivity. The module also offers the six most commonly used consent forms in digital format for secure storage and allows oral surgeons to attach anesthesia records directly to patient files for accurate dosage tracking. CS WinOMS Cloud integrates with Criticare monitors by monitoring and recording vitals in real time, so the information can be compiled directly into patients' EMR records.

Versatile Add-On Modules: In addition to EMR-Elite, CS WinOMS Cloud offers several other optional modules to enhance practice productivity. The Point-of-Care module gives oral surgeons the option of viewing patient information on tablet PCs from anywhere in the office. Available through PBHS's TruForm module, TruForm integration for CS WinOMS Cloud enables patients to enter their own demographics, insurance information and health history directly through a practice's website. The data is verified by a staff member and quickly converted into a new patient account, saving valuable time for front office teams.

eServices Integration: A variety of eServices can be integrated into CS WinOMS Cloud to simplify and automate many essential, but time-consuming, administrative tasks such as sending appointment reminders, and printing and mailing statements. eServices can also streamline insurance procedures by checking patient eligibility without having to call a carrier and automatically submitting electronic claims for faster reimbursement. The newest eService, ePrescriptions, allows practices to send electronic patient prescriptions directly to a preferred

pharmacy, leading to less confusion and fewer errors in prescription fulfillment that can result from potentially illegible handwritten forms.

Third-Party Partners: CS WinOMS Cloud provides more features through third-party partnerships. The Amazing Charts Electronic Health Record (EHR) helps guide users through the process of data collection and documentation. These reports are essential to complete the attestation process and collect any available funds. PBHS's iConsult v3.0 automatically syncs and integrates any images, informed consents, forms, notes, audio files or other documents used during consultations directly into patients' CS WinOMS Cloud file. OMS³'s Practice Pilot utilizes CS WinOMS Cloud data to provide customizable business dashboards and charts for visualizing practices' key productivity indicators. Practice Pilot enhances the reporting capabilities of CS WinOMS Cloud, giving oral surgery practices the ability to make more informed decisions regarding practice growth, development and management. Lexicomp® Online™ for Dentistry integrates a drug interaction screening tool into CS WinOMS Cloud so oral surgeons can quickly create and store patient medication history in order to ensure safe medication management.

More Information
