

CS WinOMS Fact Sheet

Product Summary

For nearly 20 years, CS WinOMS has provided the tools oral and maxillofacial surgeons need to effectively manage their practice. Today, nearly 5,000 oral surgeons use CS WinOMS in their office to store patient information, electronic records and images in one central location. The software also features medical and dental insurance billing with automatic cross-coding, scheduling, and a complete range of tools to help track and maintain patient health. Updated components of CS WinOMS, such as the EMR-Elite module, ePrescriptions and additional user-requested enhancements, further streamline practices' clinical tasks.

Product Features and User Benefits

Paperless Record Keeping: The latest version of CS WinOMS features the EMR-Elite module, which includes a library of customizable templates that facilitate paperless documentation of patient reports, consent forms, consultation notes and surgical notes, improving practice productivity. Text "snippets" help oral surgeons save time when completing documentation by drawing from a database of frequently used phrases. The module also offers the six most commonly used consent forms in digital format for secure storage and allows oral surgeons to attach anesthesia records directly to patient files for accurate dosage tracking. CS WinOMS integrates with Criticare monitors to provide real-time vitals monitoring and recording that are compiled directly into patients' EMR records.

Versatile Add-On Modules: In addition to EMR-Elite, CS WinOMS offers several other optional modules to enhance practice productivity. The Point-of-Care module gives oral surgeons the option of viewing patient information on tablet PCs from anywhere in the office. Available through the purchase of PBHS's TruForm module, the TruForm Integration for CS WinOMS enables patients to enter their own demographics, insurance information and health history directly through a practice's website. The data is verified by a staff member and quickly converted into a new patient account, saving valuable time for front office teams. CS WinOMS also offers QuickBooks Integration for managing cash, check and credit card payments.

Easy Access to Patient Information: Oral surgeons can use the PEARL module to access CS WinOMS from the palm of their hand with an iPhone or Blackberry. This allows them to view patient demographics, clinical notes, their schedule, financial information, reports, images and more from any location with wireless access.

eServices Integration: A variety of eServices can be integrated into CS WinOMS to simplify and automate many essential, but time-consuming, administrative tasks such as sending appointment reminders, printing and mailing statements, and backing up critical practice data. eServices can also streamline insurance procedures by checking patient eligibility without having to call a carrier and automatically submitting electronic claims for faster reimbursement. These include eReminders, automated statements, eBackup, eVerifications and eClaims.

The newest eService, ePrescriptions, allows practices to send electronic patient prescriptions directly to a preferred pharmacy, leading to less confusion and fewer errors in prescription fulfillment that can result from potentially illegible handwritten forms. ePrescriptions saves patients' time as they no longer have to wait for a prescription to be filled at their pharmacies.

Third-Party Partners: CS WinOMS provides more features through third-party partnerships. The Amazing Charts Electronic Health Record (EHR) meets all 25 of the necessary requirements to be certified for meaningful use, enabling eligible professionals to receive the significant financial incentives offered by the Centers for Medicare & Medicaid Services under the Health Information Technology for Economic and Clinical Health (HITECH) Act. Amazing Charts helps guide users through the process of data collection and documentation. These reports are essential to complete the attestation process and collect any available funds.

PBHS's iConsult v3.0 automatically syncs and integrates any images, informed consents, forms, notes, audio files or other documents used during consultations directly into patients' CS WinOMS file. iConsult also includes more than 100 animations, illustrations and 3D models that can help educate patients on the particulars of a treatment plan.

OMS³'s Practice Pilot utilizes CS WinOMS data to provide customizable business dashboards and charts for visualizing practices' key productivity indicators. Practice Pilot enhances the reporting capabilities of CS WinOMS, giving oral surgery practices the ability to make more informed decisions regarding practice growth, development and management.

Lexicomp® Online™ for Dentistry integrates a drug interaction screening tool into CS WinOMS so oral surgeons can quickly create and store patient medication history in order to ensure safe medication management.
