RVG 6500 System

Product Summary
The RVG 6500 can be used in a variety of practice configurations, including multi-sensor and multi-computer environments. Offering the same, unparalleled image quality as the RVG 6100 (> 20 line pairs/mm), the RVG 6500 utilizes Wi-Fi technology so the device can be easily shared between operatories.

Product Features and User Benefits

Intraoral Sensors with Unsurpassed Image Resolution – Now Wireless: The RVG 6500 System utilizes proven Wi-Fi technology to deliver the highest resolution images of any intraoral sensor in the industry (> 20 line pairs/mm). This resolution is the same, best-in-class image quality as the wired RVG 6100 Sensors and provides unmatched anatomical detail for clear, sharp images.

Improved Workflow: Wi-Fi technology eliminates the need for the RVG 6500 Sensors to have a wired connection to a computer. In just seconds, images can be transferred to the operatory’s computer with no workflow interruptions.

Convenient and Easy to Share: The RVG 6500 System’s wireless design enables practitioners to move the sensors from one examination room to another without cumbersome cords. The sensors can even be used in a variety of practice configurations, accommodating both multi-sensor and multi-computer environments and giving unprecedented imaging flexibility to single- and multi-chair practices alike.

Comfortable, Ergonomic and Durable: With three sensor sizes available, the RVG 6500 Sensors are perfectly sized for any examination, including a size 0 sensor that is ideal for pediatric applications. Rounded corners ensure patient comfort, and the sensors’ ergonomic design makes positioning quick and simple. The RVG 6500 sensors are waterproof and built with shock-resistant casing that protects from falls, bites and other damage, providing maximum durability for a long lifespan.

Product Award and Recognition: In October 2011, Carestream Dental was one of 16 companies to receive the Pride Institute’s Best of Class Technology Award for the RVG 6500 System. Carestream Dental was an honoree in the “Emerging” category for the system’s film-quality intraoral radiographs and rapid image acquisition. A panel of dental technology experts, organized by the Pride Institute, a dental practice management consulting firm based in Novato, Calif., selected the 2011 winning products through an unbiased, rigorous assessment process.

More Information
