

CS 9300C Testimonials

CS 9300C Testimonial from Dr. Dwight Simpson:

“We absolutely love our CS 9300C. We have had it for nearly two years now. It has totally increased our ability to diagnose and treat complex cases. We have increased our services by treating them in-office rather than referring. The image quality is unsurpassed and with the cephalometric attachment and panoramic features, the unit is fantastically versatile. Support has been excellent with immediate problem resolution in the few times it was needed. Thank you Carestream Dental for a very satisfying experience!”

CS 9300C Testimonial from Dr. Bruce Goldstein:

“At Goldstein & Feinberg Orthodontics, it is our philosophy to offer patients a complete orthodontic experience through the use of progressive treatment methods and superior service, which is why we chose the CS 9300C for our practice.

There is a paradigm shift to cone beam computed tomography (CBCT) occurring in the oral health industry. As an orthodontist, it is important to have the ability to capture a variety of images so I can develop the most comprehensive treatment plans for our patients. The CS 9300C serves as an all-purpose extraoral imaging solution, allowing me to capture 2D panoramic, cephalometric and 3D images.

Before CBCT, orthodontists had to make tooth movement choices without knowing how these decisions might impact the patients' supporting tissues. Now — with the CS 9300C — I can see Three dimensional images that depict the anatomy more accurately. We can see how roots interface with each other and the level of bone surrounding teeth. This improved level of detail helps me develop a more accurate treatment plan for my patients.

To further enhance my diagnostic capabilities, I use the CS 9300C with SureSmile® technology. SureSmile uses CBCT images to create virtual patients, which allows me to proactively plan tooth movement on digital models. In order for the SureSmile technology to work, the CBCT images must be extremely accurate and detailed. The CS 9300C delivers images that depict the precise anatomical data that is required by SureSmile.

The CS 9300C displays images with 1:1 accuracy. The crisp, clear images from the CS 9300C combined with the ability to visually demonstrate tooth movement, using SureSmile, helps my

patients see and understand their treatment. With this greater level of education, my patients are able to be more actively engaged in selecting treatment options.

With the CS 9300C and SureSmile, there is less guess work, and I can deliver treatment with confidence.”

CS 9300C Testimonial from Dr. Michael McLaughlin:

“The CS 9300C has really exceed my expectations. I was excited about getting new CBCT technology, but what I didn’t realize is that all aspects of my radiography have improved in quality. I have the benefits of 3D imaging, the ability to create Cephalometric views from a 3D volumes and I am still able to capture beautiful 2D cephs as well. And knowing that I’m getting this with the lowest possible radiation, I’m thrilled.

As for the unit itself, I think it’s an elegant machine—it just looks high tech. My patients can see the quality when they step in the room to get their X-ray taken. Kudos to Carestream Dental for coming up with such a wonderful product. All other orthodontists and general dentists who are considering the CS 9300—believe me, you will be glad you did it. The quality is beyond compare.”
