

CS 3500 Testimonials

CS 3500 Testimonial from Dr. David Weinman:

The CS 3500 is a no-brainer, you have to have this equipment in your office. This is obviously the way the future's going. There's really no downside; it's user-friendly and the learning curve was not that bad. We're using it every day.

I'm really impressed with the accuracy of the scans captured with the CS 3500 intraoral scanner; because the impression is digital, you can enhance the image on the computer screen and see every detail. I've also been impressed with the restorations I'm getting back from the lab and how well the crowns fit, which was due to the accuracy of the digital impression I had submitted. I can clinically feel the difference. It's very convenient to email digital impressions to the lab. The turnaround time has been great.

Patients really enjoy watching the impression begin to form on the computer screen. It actually encourages my staff and me to practice better dentistry, as my patients can clearly see what's smooth, what's clear and also spots that we might have missed when taking the impression.

-David Weinman DMD
Westfield, NJ

CS 3500 Testimonial from Cary Brown:

My favorite feature of the CS 3500 intraoral scanner is the direct STL output, so I can use the file however I want. I've used previous scanners that restricted use of the file; you'd have to send them to a clearing house or back to the company to get them un-encrypted. I like the freedom of the CS 3500 because I can use the scans right away however I want.

The scanner is also easy to use, straight-forward; it gives really accurate images, too. The first few restorations we did fit great, we had no problems at all—I was really impressed. I also like the fact that it's connected to a laptop so we can move it around easily. I do have a lab of my own so I can take it to the lab when necessary—it's easy to transport.

-Dr. Cary Brown

Murrieta, Calif.

CS 3500 Testimonial from Dr. George Alamir:

“I use the CS 3500 intraoral digital impression scanner as an integrated system, even though my practice management and imaging software is from a different company. Thanks to its open platform, I can easily launch the scanner directly from my software, store my images on one location and review the digital impression in CS Model without ever having to re-enter the patient’s name.”

CS 3500 Testimonial from Dr. Dan Delrose:

“By using the CS 3500 intraoral scanner, we eliminate many of the problems that come with using impression materials and pouring casts—all you have to do is scan the tooth and send the data to your restoration software or the lab. But probably the most important feature of the whole scanner is something so simple—that it’s not connected to a trolley. It’s not connected to a tower or a workstation. You’re going to be able to take this light, ergonomic scanner and plug it right into your workstation in the operatory, quickly and easily.”

-Dr. Dan Delrose
Ellenton, FL, USA

CS 3500 Testimonial from Robin H. Vaughn:

“I thoroughly enjoy using the CS 3500 intraoral scanner. I appreciate that the scanner is so easy to learn and love the fact that it is portable and lightweight, as that streamlines the scanning process. After some practice, I was able to do the digital scan in a comparable amount of time to taking impressions. Scanning with the CS 3500 is certainly faster, even if the traditional impression was successful on the first attempt, and definitely shorter than if the first traditional impression was a fail. I am even able to complete a digital scan of a single arch using the CS 3500 in about 7-8 minutes.

When you’re dealing with young patients, comfort is at top of mind. When a traditional impression is taken on a patient who is unfamiliar with the impression process, it often makes them gag—resulting in an unpleasant experience. The CS 3500 has eliminated this problem and improved patient care.”

-Robin H. Vaughn, Scanning Expert for Waugh and Allen Orthodontics

CS 3500 Testimonial from Dr. Antonio Cacioppo:

“I think the intraoral scanner from Carestream Dental is a very good intraoral scanner. The small design, the ergonomics fit very well in my hand. I appreciate it for its fast scanning and—of course—for the ability to use it on multiple PCs with a USB connection. It’s a very good option. You can focus on your patient’s mouth and everything you need is on the scanner. I think it’s perfect.”

-Dr. Antonio Cacioppo
Palermo, Italy

CS 3500 Testimonial from Dr. Carsten Stockleben:

“With the CS 3500, it’s easy. You just say ‘I want my scanner,’ put it in, and start. It’s small, it’s light, it can be connected to any computer via USB, so I don’t have to have a big trolley with a computer and a monitor that have to be driven around the operatories. You don’t need powder, you don’t have to mess around in the patient’s mouth, keep it dry, put the powder in, and so on. It makes it much easier. It’s got a guiding system and that allows me to concentrate and to take the impression or the scan in the mouth, and that’s fantastic.”

-Dr. Carsten Stockleben
Hannover, Germany

CS 3500 Testimonial from Dr. Paul G. Trotter:

“We love our two CS 3500 intraoral scanners! We have been short-handed for much of the summer, and having the scanner has allowed us more free time for our lab technician to be able to work chairside to fill in the gaps. If we were still pouring and trimming models, she never would have had time to come out of the lab to help out. The CS 3500 intraoral scanners have increased the efficiency of my office.”

-Dr. Paul G. Trotter, D.M.D.
Partner, Trotter Orthodontics
