

Gil Orenstein

*Regional Product Manager, US&C
Intraoral Imaging
Carestream Dental*

Gil Orenstein is the regional product manager for Carestream Dental's complete offering of intraoral digital imaging solutions, including RVG sensors, imaging plate systems and intraoral cameras, as well as X-ray generators.

With over 10 years of experience in medical device support and training gained at hospitals, cancer centers and offices around the globe, Orenstein has a strong background in how dental technology is received and utilized by doctors and patients. Now, as a product manager at Carestream Dental, he researches and delivers integral market input and improvements that help make a positive impact on the doctor's user experience.

The intraoral imaging portfolio at Carestream Dental is built on the concept of helping practices succeed with the technology that fits their workflows best.

As the inventor of the world's first digital intraoral sensor for dentistry, Carestream Dental brings a unique perspective to the market. Along with the expertly designed RVG sensors, doctors may also choose to work with imaging plate systems. Of course, high-quality intraoral images wouldn't be possible without X-ray generators, an important part of the intraoral imaging chain. And, no intraoral system would be complete without an intraoral camera.

Orenstein is a certified Pragmatic Marketing III professional and a graduate of the University of Toledo in Ohio, with a Bachelor of Science in electrical engineering.
