

"Congratulations on the new look and feel of CS OrthoTrac. It's obvious customer feedback played a major part in your design, because version 14 charting addresses relevant, day-to-day clinical needs. As our industry evolves, clinical management tools must reflect those changes. The unique aligner tracking system is fresh and new and will be important in tracking trays, revisions and treatment progress. I look forward to watching your development team continue to add features that our OrthoTrac clients can enjoy and benefit from."
